OpenAI Hiring Team

Re: AI Success Engineer

Dear OpenAI Hiring Team,

I am applying for the AI Success Engineer role. I am based in Las Vegas and prefer a Remote US role, with regular travel to San Francisco when useful.

The AI Success Engineer role matches the way I work: embed with the customer workflow, identify the real blocker, build the adoption path, teach the pattern, measure value, and return field learning to the product team. The current posting asks for post-sales technical relationship ownership, account health, adoption velocity, workflow mapping, KPI definition, and value realization; that is the bridge between my account-analytics background and my AI-assisted product work.

My strongest AI Success bridge is the combination of Critical On Hand account analytics and Sip Studies product work. At Breakthru, I built and maintain weekly workbooks that translate messy POD gaps, inventory, sales movement, incentives, and account opportunities into execution priorities. In Sip Studies and Sipopedia, I used advanced prompting, durable goals/threads, and repo-driven AI agent workflows to build working education, terminology, paid-access, validation, and documentation artifacts. Together, those projects show the same operating loop OpenAI asks for: understand the workflow, structure the adoption path, make the technical work explainable, and measure whether the behavior changed.

For this application, I would describe the work as a human-owned AI build process. AI accelerated exploration and implementation, but I owned the judgment, prompts, review, testing, documentation, customer interpretation, and final behavior. The useful signal is the artifact plus the reasoning, constraints, validation, and customer story behind it.

Before Sip Studies, I built more than a decade of customer-facing sales, education, and account-analytics experience. At Breakthru Beverage Group, I built and maintain weekly Critical On Hand / Gap Analysis workbooks that evaluate customer POD gaps, on-hand inventory, days on hand, sales movement, incentives, and account opportunities. I also expanded 3,500+ placements and contributed to a $2.291M wine revenue lift within Lee’s Liquor. At AARP Colorado, I led live and recorded virtual education for adults across all 50 states. At Total Wine & More, I wrote curriculum, taught customers, and trained staff. That background matters because AI adoption is not only a technical problem. It requires trust, clear examples, stakeholder alignment, and a path from first use to durable behavior change.

I would bring OpenAI a practical builder’s mindset: understand the workflow, build the example, teach the pattern, measure whether it works, and feed the learning back into the product or program. I am comfortable moving between hands-on product detail, customer enablement, executive framing, and careful documentation.

AI Success Engineer
Las Vegas, NV | JonYu3@gmail.com | 617.637.0668 | SipStudies.com | Sipopedia.com

Thank you for considering my application. I would welcome the chance to discuss how I can help OpenAI turn ambitious product capability into adopted workflows, measurable customer value, and reusable field learning around OpenAI's customer adoption and value-realization goals.

Sincerely,

Jonathan Yu
