Jonathan Yu - 30-60-90 Plan

Target Role: Product Marketing Manager, Codex

Team: Marketing

Location: Remote - US with regular travel to San Francisco

Compensation: $227K-$315K + equity

OPERATING THESIS

Codex positioning, developer workflow narratives, launch assets, sales enablement, and adoption measurement.

The first 90 days should prove fast Codex fluency, credible workflow empathy, and one reusable artifact that helps customers understand, adopt, or expand an AI-assisted development pattern.

ROLE SIGNALS I AM PLANNING AROUND

- OpenAI describes this role as driving adoption and growth for Codex through developer-facing positioning and launch work.
- The posting emphasizes developer workflows, Codex messaging, launch content, technical narratives, sales enablement, developer research, and adoption metrics.

FIRST 30 DAYS - LEARN, MAP, AND SHIP A SMALL USEFUL ARTIFACT

- Learn current Codex positioning, launch history, developer segments, adoption metrics, competitive landscape, and Sales/Developer Experience needs.
- Review demos, docs, landing pages, sales materials, customer calls, and community feedback for friction in the adoption story.
- Map core developer workflows where Codex has a clear value story: code understanding, issue-to-PR, test generation, migration, review, and docs maintenance.
- Draft one concise messaging matrix linking audience, pain, workflow, proof, demo, and next action.

DAYS 31-60 - PILOT, PACKAGE, AND MEASURE

- Create a technical narrative package for one high-priority Codex use case: blog outline, demo script, landing-page angle, sales talk track, and FAQ.
- Partner with Developer Experience and Product to refine examples so they feel credible to hands-on engineers.
- Build a competitive-positioning brief focused on workflow reality rather than feature checklists.
- Define measurement for the package: developer engagement, trial activation, sales usage, and follow-on adoption.

DAYS 61-90 - SCALE THE PATTERN

- Ship a polished campaign or launch-support package for a Codex capability or use-case cluster.
- Create a reusable sales-enablement kit that helps GTM teams explain Codex in real developer workflows.

- Turn developer and customer feedback into a product-marketing insights memo for Product and Growth.
- Establish a repeatable rhythm for testing messaging against adoption, usage, and developer trust signals.

HOW I WOULD MEASURE EARLY SUCCESS

- I can clearly explain the role's priority product surfaces, customer or learner personas, adoption blockers, and internal handoff model.
- I have shipped at least one artifact the team can reuse: messaging matrix, launch narrative, developer workflow story, sales enablement asset, FAQ, or adoption metric brief.
- My work produces evidence: workshop feedback, adoption movement, content quality improvement, product feedback, or clearer stakeholder alignment.
- I have built trust with the immediate team by being useful, precise, and willing to do the hands-on work.
