Jonathan Yu - 30-60-90 Plan

Target Role: Customer Education, Learning Experience & Curriculum Lead

Team: GTM Readiness

Location: San Francisco

Compensation: $207K-$230K + equity

OPERATING THESIS

AI-native learning pathways, curriculum standards, badging structure, analytics, and scalable course operations.

The first 90 days should prove fast product fluency, useful customer or learner empathy, and one reusable operating asset that improves adoption beyond a single engagement.

ROLE SIGNALS I AM PLANNING AROUND

- OpenAI describes this role as owning strategy and execution for enterprise learning pathways and curriculum.
- The posting emphasizes curriculum writing, assessments, credential structure, AI-assisted course production, analytics, and alignment with Product and Technical Success.

FIRST 30 DAYS - LEARN, MAP, AND SHIP A SMALL USEFUL ARTIFACT

- Map current Customer Education pathways, learner personas, high-priority product surfaces, and field feedback from Technical Success.
- Audit existing course templates, assessments, completion data, and update workflows for consistency and maintenance burden.
- Shadow customer education sessions and identify the top five skill gaps blocking enterprise adoption.
- Produce one lightweight curriculum improvement: objectives, lesson outline, practice task, quiz, rubric, and QA checklist.

DAYS 31-60 - PILOT, PACKAGE, AND MEASURE

- Build a modular pathway blueprint for one priority audience, from fundamentals through applied workflow practice.
- Create a reusable AI-assisted course production kit: prompt patterns, review checklist, example/test-case library, and update cadence.
- Pilot assessment and badge criteria that represent practical skill, not passive completion.
- Partner with Product and Technical Success to turn field blockers into curriculum backlog items.

DAYS 61-90 - SCALE THE PATTERN

- Launch a measurable learning pathway with baseline metrics, completion targets, practice performance, and downstream adoption signals.
- Publish standards for course scripts, exercises, rubrics, AI QA, release notes, and maintenance ownership.
- Create an operating dashboard for learning quality, freshness, and customer impact.

- Document repeatable practices so future pathways can be produced faster without lowering quality.

HOW I WOULD MEASURE EARLY SUCCESS

- I can clearly explain the role's priority product surfaces, customer or learner personas, adoption blockers, and internal handoff model.
- I have shipped at least one artifact the team can reuse: learning pathway, rubric, course template, assessment model, credential map, or QA checklist.
- My work produces evidence: workshop feedback, adoption movement, content quality improvement, product feedback, or clearer stakeholder alignment.
- I have built trust with the immediate team by being useful, precise, and willing to do the hands-on work.
