Jonathan Yu - 30-60-90 Plan

Target Role: AI Deployment Engineer - Codex

Team: Technical Success

Location: Remote - US

Compensation: $197K-$278K + equity

OPERATING THESIS

Codex demos, customer SDLC mapping, workflow automations, technical enablement, and product-feedback loops.

The first 90 days should prove three things: fast product fluency, useful customer or learner empathy, and one repeatable operating asset that improves adoption beyond a single account or course.

FIRST 30 DAYS - LEARN, MAP, AND SHIP A SMALL USEFUL ARTIFACT

- Build fluency in OpenAI's Codex deployment patterns, current customer segmentation, safety guidance, and internal enablement materials.
- Shadow customer workshops and note where engineering teams stall: repo setup, review habits, security concerns, context management, or rollout governance.
- Create a personal demo library that shows Codex improving a real SDLC task from issue intake to tested pull request.
- Draft a reusable customer discovery worksheet for AI coding workflow maturity.

DAYS 31-60 - PILOT, PACKAGE, AND MEASURE

- Lead or co-lead workshops that help engineering teams redesign one narrow workflow with Codex, such as bug triage, test generation, migration support, or docs maintenance.
- Ship reference implementations and workflow automation examples that are clear enough for Sales, Solutions, and customer champions to reuse.
- Create field notes that separate product gaps, change-management gaps, and customer-environment blockers.
- Partner with Product and Applied Engineering on one product-feedback proposal grounded in customer deployment evidence.

DAYS 61-90 - SCALE THE PATTERN

- Own a portfolio slice with visible adoption metrics: activated teams, repeat usage, workshop conversion, and production workflow examples.
- Publish polished technical guidance or cookbook-style examples from repeated deployment patterns.
- Create an account rollout template that ties Codex use cases to governance, security review, developer experience, and measurable engineering impact.
- Deliver a quarterly field-pattern memo that helps Codex product teams prioritize high-leverage improvements.

HOW I WOULD MEASURE EARLY SUCCESS

- I can clearly explain the role's priority product surfaces, customer or learner personas, adoption blockers, and internal handoff model.

- I have shipped at least one artifact the team can reuse: a demo, template, pathway, checklist, playbook, messaging matrix, or account plan.
- My work produces evidence: workshop feedback, adoption movement, content quality improvement, product feedback, or clearer stakeholder alignment.
- I have built trust with the immediate team by being useful, precise, and willing to do the hands-on work.
