Jonathan Yu - 30-60-90 Plan

Target Role: AI Deployment Manager - Core Ecosystem, EDU

Team: Technical Success

Location: San Francisco and New York City

Compensation: $162K-$230K + equity

OPERATING THESIS

EDU adoption framework, campus AI literacy, workshops, enablement playbooks, activation, and feedback to Product.

The first 90 days should prove three things: fast product fluency, useful customer or learner empathy, and one repeatable operating asset that improves adoption beyond a single account or course.

FIRST 30 DAYS - LEARN, MAP, AND SHIP A SMALL USEFUL ARTIFACT

- Learn the current EDU customer journey, institution personas, adoption framework, product surfaces, and handoff points with Sales and AI Success.
- Shadow onboarding sessions, leadership briefings, and hands-on workshops for faculty, staff, students, and technical teams.
- Document repeated adoption blockers across teaching, learning, research, operations, IT, and instructional design.
- Draft a workshop map that links audience, learning objective, product capability, practice activity, and measurable next action.

DAYS 31-60 - PILOT, PACKAGE, AND MEASURE

- Co-lead or lead enablement sessions for one product area, adjusting examples for faculty, staff, and technical audiences.
- Build reusable workshop decks, facilitation notes, prompt/practice examples, and post-session activation checklists.
- Create a campus adoption scorecard that tracks activation, breadth, depth, champion coverage, and use-case progression.
- Synthesize field feedback into product and program insights with clear evidence from sessions.

DAYS 61-90 - SCALE THE PATTERN

- Own a repeatable EDU enablement package for a major workflow category, such as course design, staff operations, or research support.
- Deliver measurable adoption outcomes across onboarding, advanced training, and sustained usage.
- Publish an internal playbook of common EDU patterns, objections, demos, and facilitation moves.
- Establish a feedback rhythm with Product, Sales, AI Success, and Solutions to improve both product and deployment quality.

HOW I WOULD MEASURE EARLY SUCCESS

- I can clearly explain the role’s priority product surfaces, customer or learner personas, adoption blockers, and internal handoff model.

- I have shipped at least one artifact the team can reuse: a demo, template, pathway, checklist, playbook, messaging matrix, or account plan.
- My work produces evidence: workshop feedback, adoption movement, content quality improvement, product feedback, or clearer stakeholder alignment.
- I have built trust with the immediate team by being useful, precise, and willing to do the hands-on work.
