Jonathan Yu - 30-60-90 Plan

Target Role: Deployed Product Manager, Codex

Team: Codex - Engineering

Location: San Francisco

Compensation: $250K-$330K + equity

OPERATING THESIS

Strategic accounts, product expansion, customer blockers, technical workflow unblocking, and Codex feedback to core product teams.

The first 90 days should prove three things: fast product fluency, useful customer or learner empathy, and one repeatable operating asset that improves adoption beyond a single account or course.

FIRST 30 DAYS - LEARN, MAP, AND SHIP A SMALL USEFUL ARTIFACT

- Learn Codex product strategy, deployment engineering motions, account segmentation, and the most common blockers in strategic customer adoption.
- Shadow Deployment Engineers and GTM teams across customer calls to understand executive goals, engineering pain, technical constraints, and expansion openings.
- Build a blocker taxonomy separating product gaps, integration issues, security concerns, workflow design, and change-management friction.
- Create one lightweight account map format that ties customer goals to product surfaces, deployment path, and next best unblock.

DAYS 31-60 - PILOT, PACKAGE, AND MEASURE

- Partner on strategic accounts to identify deeper Codex deployment opportunities across teams, workflows, and integrations.
- Drive one hands-on unblock with a demo, prototype, MCP/tooling pattern, or workflow design that helps a customer move forward.
- Translate repeated customer blockers into clear product feedback and prioritization candidates.
- Create a shared account-growth artifact for Deployment Engineering, Product, Sales, and GTM alignment.

DAYS 61-90 - SCALE THE PATTERN

- Own product-side execution for a strategic deployment motion, including expansion thesis, stakeholder plan, blocker log, and product-feedback path.
- Deliver a field-informed product opportunity memo that turns account evidence into roadmap insight.
- Package a repeatable deployment play for a common Codex expansion path.
- Become a trusted internal partner who can move between customer rooms, product decisions, technical details, and execution follow-through.

HOW I WOULD MEASURE EARLY SUCCESS

- I can clearly explain the role’s priority product surfaces, customer or learner personas, adoption blockers, and internal handoff model.

- I have shipped at least one artifact the team can reuse: a demo, template, pathway, checklist, playbook, messaging matrix, or account plan.
- My work produces evidence: workshop feedback, adoption movement, content quality improvement, product feedback, or clearer stakeholder alignment.
- I have built trust with the immediate team by being useful, precise, and willing to do the hands-on work.
